## **QUALITATIVE DISCLOSURE ON LIQUIDITY COVERAGE RATIO**

### **Governance of liquidity risk management**

Riyad Bank has a robust risk management and governance framework that covers all material risks. Liquidity risk is deemed to be a material risk for the Bank and is part of the overall risk management framework. The risk management framework comprises of Board and Senior Management committees, a Board-approved risk appetite statement, liquidity risk policy, limit management, monitoring and control framework, and an overarching enterprise risk policy.

The Bank adopts a set of liquidity management strategies that limits the liquidity risk to acceptable levels. The compliance of such internal limits are independently monitored and regularly reported to management and to the Asset and Liability Committee (ALCO). According to the degree of imminence of liquidity/funding risk, risk stages are outlined in the CP. These stages are Precaution, Caution and Crisis. For each of these stages, a specific contingency plan has been laid out.

The policy stipulates activation of the Contingency Plan (CP) in the event of a major liquidity problem. The CP delineates responsibilities of selected senior executives and sets out a plan of action to be followed in any emerging or sudden liquidity crisis. In order to manage the liquidity contingency process, senior executives designated in this plan draw support from other key management process already established within Riyad Bank. ALCO, on an ongoing basis provides a forum to exchange information, both internal and external, which can affect Riyad Bank's liquidity.

### **Funding Strategy**

The formulation of funding strategy for the Bank is integrated with the annual strategic planning process. Annually, the Bank develops a detailed budget for immediate next year and a three year rolling forecast. For each asset type, forecast volumes are developed. Based on the forecast volumes and forecast mix, the funding strategy of the Bank is developed.

The funding strategy of the Bank focusses on increasing the customer base of non-interest bearing stable deposits, diversification of funding sources as well enlarging the product mix and customer base of interest bearing deposits. It also ensures that there is minimum reliance on the whole sale funding (inter-bank) markets and that the Bank maintains a conservative and healthy repo able investment portfolio.

### **Liquidity risk mitigation techniques**

Riyad Bank operates within an approved Liquidity risk appetite which is defined as the level and nature of risk that the Bank is willing to take (or mitigate) in order to safeguard the interests of the depositors whilst achieving business objectives. In addition, the risk appetite statement takes into consideration constraints imposed by other stakeholders such as regulators and counterparties. Funding and Liquidity

risk is deemed to be a material risk for the Bank; the risk appetite for funding and liquidity is conservative and deemed to be low. The liquidity risk appetite statement is approved by the Board. Risk appetite is defined on an annual basis or on an ad hoc basis if there is a significant change in the external environment or business strategy.

**In addition, the Bank's liquidity risk management techniques include:**

- a. Pro-actively monitor and manage regulatory liquidity ratios such as LCR, NSFR and Statutory Liquidity Ratio
- b. Gap limits to control and monitor the mismatch risk
- c. Concentration Risk limits

### **Stress Testing**

Riyad Bank measures its liquidity requirements by undertaking scenario analysis under the following three scenarios:

Normal/Going-concern scenario – this refers to the normal behaviour of cash flows in the ordinary course of business and would form the day-to-day focus of the **Bank's liquidity management.**

Bank-specific ("Name") crisis scenario – this covers the behaviour of cash flows where there is some actual or perceived problem specific to Riyad Bank.

Market crisis scenario – this covers the behaviour of cash flows where there is some actual or perceived problem with the general banking industry..

In addition, Riyad Bank has adopted more stringent standards or parameters to reflect its liquidity risk profile and its own assessment of the compliance with the **SAMA's Liquidity Coverage Ratio (LCR) standards. The LCR incorporates many of** the shocks experienced during the Global Financial Crisis (GFC) into one acute systemic stress for which sufficient liquidity is needed to survive up to 30 calendar days. Riyad Bank adopts a number of liquidity management strategies to control its liquidity risk and ensures that its liquidity requirements can be met even during a crisis situation.

### **Funding Contingency Planning**

Riyad Bank has its own Contingency Funding Plan (CFP). The objective of the **Bank's CFP is to ensure the Bank meets its payment obligations as they** fall due under a liquidity crisis scenario. It contains (i) an assessment of the sources of funding under different liquidity conditions, (ii) liquidity status indicators and metrics and (iii) contingency procedures. Contingency liquidity risk is the risk of not having sufficient funds to meet sudden and unexpected short term obligations. The CFP references business area action plans and a communications plan. Action plans have been developed for a range of circumstances that might arise in wholesale funding markets. The communications plan aims to reassure principal stakeholders via a rapid communications response to a developing situation. CFP is

reviewed annually or if there is a significant change in the external environment or the balance sheet or funding profile of the Bank.

## OTHER QUALITATIVE INFORMATION

### 1. Main drivers of LCR

As at 31st December 2015, against the regulatory requirement of 60% of LCR, the Bank is at a comfortable level of quarterly average of plus 178%. The main drivers of LCR of the Bank are sufficient high quality liquid assets (HQLAs) to meet liquidity needs of the Bank at all times and funding from stable customer deposits.

### 2. Intra period changes as well as changes over time

There has not been any significant intra period changes in LCR. However, slight decrease in average quarterly LCR in 31st Dec 2015 compared to the previous quarter was due to increase in average quarterly outflows from wholesale funding.

### 3. Composition of High Quality Liquid Assets (HQLA)

HQLA comprises of high quality unencumbered assets that can be readily converted into cash at little or no loss of value or used as collateral to obtain funds in a range of stress scenarios. HQLAs comprises of Level 1 and Level 2 assets. Level 2 assets is further divided into Level 2A and Level 2B assets, keeping in view their price volatility.

Level-1 assets are those assets which are highly liquid. As at 31<sup>st</sup> December 2015, the Level-1 assets of the Bank included cash, due from SAMA and high quality qualifying government securities.

**Level-2A & 2B assets are those assets which are less liquid. The Bank's level 2A assets includes sovereign central bank, PSE assets qualifying for 20% risk weighting and qualifying corporate bonds rated AA- or higher. SAMA does not allow the inclusion of level 2B assets**

### 4. Concentration of Funding Sources

This metric includes those sources of funding, whose withdrawal could trigger liquidity risks. It aims to address the funding concentration of a bank by monitoring its funding requirement from each significant counterparty and each significant product/instrument.

The Bank regularly reviews and measures concentration of funding for each counter party as well as from all products and instruments to ensure that it is **within Bank's** liquidity risk appetite.

#### 5. Derivative exposure

As at 31<sup>st</sup> December 2015, the mark to market of the Bank's back to back derivative exposures does not have significant impact on liquidity management.

#### 6. Currency Mismatch

As per SAMA guidelines, a currency is considered as "significant" if the aggregate liabilities denominated in that currency amounts to five per cent or more of the bank's total liabilities. In Riyadh Bank's case, only SAR and USD falls in this criteria.

#### 7. Degree of centralization of liquidity management and interaction between group's units

Riyad Bank's LCR is prepared on a consolidated basis. The Bank has put in place a group-wide contingency funding plan to take care of liquidity requirement of the Group as a whole in time of stress.
